```python
# Input the edges
print("Enter the edges (node1 node2):")
for _ in range(edges):
    u, v = map(int, input().split())
    graph[u].append(v)
    graph[v].append(u)  # Assuming undirected graph

# Input the starting node
start_node = int(input("Enter the starting node: "))

# Call DFS
print("DFS Traversal starting from node", start_node, ":")
visited = set()
DFS(graph, start_node, visited)
```

```
Enter the number of nodes: 6
Enter the number of edges: 7
Enter the edges (node1 node2):
0 1
0 2
1 3
1 4
2 4
3 5
4 5
Enter the starting node: 0
DFS Traversal starting from node 0 :
0 1 3 5 4 2
```
